PROJECTS

My Member— CRM

- Currently I am working on this Project. It's a CRM, where I am working with attendance email-marketing, digital-signature, memberships and to manage members.

Turing: E-commerce ([code](#))

- In this project , I have made a backend of an E-commerce website using the Express framework of Nodejs. I have used JWT authentication.

To-Do app with React([code](#))

- I have created a ToDo app using React, you can add/update/delete your Tasks.

Employee- Registration

backend([code](#))

- Here i created a backend of user- Employee SIGN-UP/Login. I also have a JWT for Authentication. I have used mongoDb as Database. For password verification I implemented bcrypt.

Mailer

([code](#))

- I have built an Email Application using nodeJs-ExpressJs,Gmail and NodeMailer. the user can send email to any valid email address.User can also attach any kind of documents.

Saral Request (python)([code](#))

- In this project, I used the Python Requests module to get Saral (Navgurukul's e-learning platform)

API and make a small browser in the terminal.

IMDB Scraper (Python) ([code](#))

- i have scraped data of top 250 indian hindi movies using BeautifulSoup
